

## Amendments to the Claims

A1  
1. (Currently Amended) A label printer system, ~~comprising:~~ for a disk  
storage medium including a thermally-sensitive layer formed on at least a portion  
5 of an ~~upper~~ a surface of said disk storage medium, the label printer system  
comprising:

a rotational drive for rotating said disk storage medium;  
a transverse drive including a laser head for moving a laser ~~of said disk~~  
~~drive~~ substantially transversely with respect to said disk storage medium;  
10 a memory including a symbol set and a label printer driver; and  
a processor communicating with said memory, said rotational drive, said  
transverse drive, and said laser, and wherein said processor uses said label  
printer driver to control said rotational drive and said transverse drive in order to  
thermally write said symbol set to said thermally-sensitive layer of said disk  
15 storage medium using said laser.

2. (Original) The system of claim 1, wherein said memory further includes a  
rotational position variable that tracks a rotational position of said disk storage  
medium.

20 3. (Original) The system of claim 1, wherein said memory further includes a  
transverse position variable that tracks a transverse position of said laser head.

4. (Original) The system of claim 1, wherein said memory further includes a  
25 disk orientation variable that tracks an orientation of said disk storage medium.

5. (Original) The system of claim 1, wherein said laser head comprises a  
read laser and a writing laser positioned below said disk storage medium, with  
said writing laser being used to thermally write to said thermally-sensitive layer.

30

6. (Currently Amended) The system of claim 1, wherein said laser head comprises a read laser and a writing laser positioned ~~below~~above said disk storage medium and further comprises ~~a label printer writing device~~an additional read laser positioned ~~above~~below said disk storage medium, with said ~~label printer writing device~~writing laser being used to thermally write to said thermally-sensitive layer.

7. (Currently Amended) A label printing method for a disk storage medium, comprising the steps of:

10 loading a symbol set to a processor controlling a disk drive, with said symbol set including one or more predetermined symbols or graphics to be written to said disk storage medium;

heating with a laser a thermally-sensitive layer formed on at least a portion of an upper surface of said disk storage medium; and

15 manipulating said laser with respect to said disk storage medium;

wherein said symbol set is used to controls the manipulating step in order to write said one or more predetermined symbols or graphics to said thermally-sensitive layer.

20 8. (Original) The method of claim 7, wherein said disk drive includes a read laser and a writing laser positioned below said disk storage medium, and further comprising the preliminary step of detecting an orientation of said disk storage medium, and wherein the heating step is performed by said writing laser and the loading, heating, and manipulating steps are performed if said disk storage

25 medium is inverted.

9. (Original) The method of claim 7, wherein said disk drive includes a read laser and a writing laser positioned below said disk storage medium and a label printer writing device positioned above said disk storage medium, and wherein the

30 heating step is performed by said label printer writing device.

10. (Original) The method of claim 7, further comprising the steps of:  
rotating said disk storage medium;  
transversely moving said laser with respect to said disk storage medium;  
tracking a rotational position of said disk storage medium in a rotational  
5 position variable; and  
tracking a transverse position of said laser in a transverse position variable;  
wherein said rotational position and said transverse position are used by  
said processor for manipulating said laser with respect to said disk storage  
medium.

10

11. (Original) The method of claim 7, further comprising the step of reading  
one or more alignment marks on said disk storage medium.

12. (Currently Amended) A label printing method for a disk storage  
15 medium, comprising the steps of:  
loading a symbol set to a processor controlling a disk drive, with said  
symbol set including one or more predetermined symbols or graphics to be written  
to said disk storage medium;  
reading one or more alignment on said disk storage medium;  
20 heating with a laser a thermally-sensitive layer formed on at least a portion  
of an upper surface of said disk storage medium; and  
manipulating said laser with respect to said disk storage medium;  
wherein said symbol set in conjunction with said one or more alignment  
marks is used to controls the manipulating step in order to write said one or more  
25 predetermined symbols or graphics to said thermally-sensitive layer.

13. (Original) The method of claim 12, wherein said one or more alignment  
marks are used to align a completed label according to a predetermined  
orientation.

30

14. (Original) The method of claim 12, wherein said one or more alignment  
marks are pre-printed on said thermally-sensitive layer.

15. (Cancelled)

16. (Original) The method of claim 12, further comprising the preliminary step of printing said one or more alignment marks to said thermally-sensitive layer before the loading step.

5

17. (Original) The method of claim 12, further comprising the step of ejecting said disk storage medium according to a predetermined orientation using said one or more alignment marks.

10

18. (Cancelled)

15

19. (Original) The method of claim 12, wherein said laser comprises a writing laser positioned below said disk storage medium, and further comprising the preliminary step of detecting an orientation of said disk storage medium, and wherein the heating step is performed by said writing laser and the loading, heating, and manipulating steps are performed if said disk storage medium is inverted.

20

20. (Original) The method of claim 12, wherein said laser comprises a label printer writing device positioned above said disk storage medium, and wherein the heating step is performed by said label printer writing device.

Cond  
A1

21. (Original) The method of claim 12, further comprising the steps of:  
rotating said disk storage medium;  
transversely moving said laser with respect to said disk storage medium;  
tracking a rotational position of said disk storage medium in a rotational  
5 position variable; and  
tracking a transverse position of said laser in a transverse position variable;  
wherein said rotational position and said transverse position are used by  
said processor for manipulating said laser with respect to said disk storage  
medium.

10

22. (New) A label printing method for a disk storage medium, comprising  
the steps of:

ADD  
A2

15

loading a symbol set to a processor controlling a disk drive, with said  
symbol set including one or more predetermined symbols or graphics to be written  
to said disk storage medium;

reading one or more alignment marks on said disk storage medium;  
heating with a laser a thermally-sensitive layer formed on at least a portion  
of an upper surface of said disk storage medium; and

20

manipulating said laser with respect to said disk storage medium;  
wherein said symbol set in conjunction with said one or more alignment  
marks used to control the manipulating step in order to write said one or more  
predetermined symbols or graphics to said thermally-sensitive layer; and

wherein said one or more alignment marks were previously written to a  
data contents of said disk storage medium.

25

23. (New) A label printing method for a disk storage medium, comprising the steps of:

loading a symbol set to a processor controlling a disk drive, with said symbol set including one or more predetermined symbols or graphics to be written

5 to said disk storage medium;

reading one or more-alignment marks on said disk storage medium;

heating with a laser a thermally-sensitive layer formed on at least a portion of an upper surface of said disk storage medium; and

manipulating said laser with respect to said disk storage medium;

10 wherein said symbol set in conjunction with said one or more alignment marks used to control the manipulating step in order to write said one or more predetermined symbols or graphics to said thermally-sensitive layer; and

ejecting said disk storage medium according to a predetermined orientation using digital data stored on said disk storage medium.

15
